

## Landscaping and Utilities

Landscaping has been completed adjacent to the new fellowship center, and around the perimeter of the property in the area of the new fellowship center (photos at right and below). Irrigation systems have also been installed to maintain the plantings in good condition.

A pressure test is being made on the new sewer lines prior to connection to the county forced main on Yulee Drive (photo below).

Sewer lines from the new buildings have been joined to lines from the older structures, and all are now connected to the county system. Our previous septic system will be closed.
